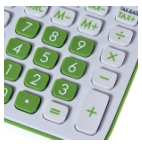
July 2017

Four Numbers You Need to Know Now



When it comes to your finances, you might easily overlook some of the numbers that really count. Here are four to pay attention to now that might really matter in the future.

1. Retirement plan contribution rate

What percentage of your salary are you contributing to a retirement plan? Making automatic contributions through an employer-sponsored plan such as a 401(k) or 403(b) plan is an easy way to save for retirement, but this out-of-sight, out-of-mind approach may result in a disparity between what you need to save and what you actually are saving for retirement. Checking your contribution rate and increasing it periodically can help you stay on track toward your retirement savings goal. .

Some employer retirement plans let you sign up for automatic contribution rate increases each year, which is a simple way to bump up the percentage you're saving over time. In addition, try to boost your contributions when you receive a pay raise. Consider contributing at least enough to receive the full company match (if any) that your employer offers.

2. Credit score

When you apply for credit, such as a mortgage, a car loan, or a credit card, your credit score is one of the tools used by lenders to evaluate your creditworthiness. Your score will likely factor into the approval decision and affect the terms and the interest rate you'll pay.

The most common credit score that creditors consider is a FICO© Score, a three-digit number that ranges from 300 to 850. This score is based on a mathematical formula that uses information contained in your credit report. In general, the higher your score, the lower the credit risk you pose.

Each of the three major credit reporting agencies (Equifax, Experian, and TransUnion) calculates FICO® scores using different formulas, so you may want to check your scores from all three (fees apply). It's also a good idea to get a copy of your credit report at least annually to check the accuracy of the information upon which your credit score is based. You're entitled to one free copy of your credit report every 12 months from each of the three credit reporting agencies. You can get your copy by visiting annualcreditreport.com.

3. Debt-to-income ratio

Your debt-to-income ratio (DTI) is another number that lenders may use when deciding whether to offer you credit. A DTI that is too high might mean that you are overextended. Your DTI is calculated by adding up your major monthly expenses and dividing that figure by your gross monthly income. The result is expressed as a percentage. For example, if your monthly expenses total $2,200 and your gross monthly income is $6,800, your DTI is 32%.

Lenders decide what DTIs are acceptable, based on the type of credit. For example, mortgage lenders generally require a ratio of 36% or less for conventional mortgages and 43% or less for FHA mortgages when considering overall expenses.

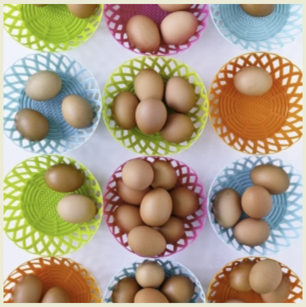
Once you know your DTI, you can take steps to reduce it if necessary. For example, you may be able to pay off a low-balance loan to remove it from the calculation. You may also want to avoid taking on new debt that might negatively affect your DTI. Check with your lender if you have any questions about acceptable DTIs or what expenses are included in the calculation.

4. Net worth

One of the key big-picture numbers you should know is your net worth, a snapshot of where you stand financially. To calculate your net worth, add up your assets (what you own) and subtract your liabilities (what you owe). Once you know your net worth, you can use it as a baseline to measure financial progress.

Ideally, your net worth will grow over time as you save more and pay down debt, at least until retirement. If your net worth is stagnant or even declining, then it might be time to make some adjustments to target your financial goals, such as trimming expenses or rethinking your investment strategy.

Why Diversification Matters



Diversification and asset allocation are methods used to help manage investment risk; they do not guarantee a profit or protect against investment loss.

When investing, particularly for long-term goals, there is one concept you will likely hear about over and over again — diversification. Why is diversification so important? The simple reason is that it helps ensure that your risk of loss is spread among a number of different investments. The theory is that if some of the investments in your portfolio decline in value, others may rise or hold steady, helping to offset the losses.

Diversifying within asset classes

For example, say you wanted to invest in stocks. Rather than investing in just domestic stocks, you could diversify your portfolio by investing in foreign stocks as well. Or you could choose to include the stocks of different size companies (small-cap, mid-cap, and/or large-cap stocks).

If your primary objective is to invest in bonds for income, you could choose both government and corporate bonds to potentially take advantage of their different risk/return profiles. You might also choose bonds of different maturities, because long-term bonds tend to react more dramatically to changes in interest rates than short-term bonds. As interest rates rise, bond prices typically fall.

Investing in mutual funds

Because mutual funds invest in a mix of securities chosen by a fund manager to pursue the fund's stated objective, they can offer a certain level of "built-in" diversification. For this reason, mutual funds may be an appropriate choice for novice investors or those wishing to take more of a hands-off approach to their portfolios. Including a variety of mutual funds with different objectives and securities in your portfolio will help diversify your holdings that much more.

Mutual funds are sold by prospectus. Please consider the investment objectives, risks, charges, and expenses carefully before investing. The prospectus, which contains this and other information about the investment company, can be obtained from your financial professional. Be sure to read the prospectus carefully before deciding whether to invest.

Diversifying among asset classes

You might also consider including a mix of different types of asset classes — stocks, bonds, and cash — in your portfolio. Asset allocation is a strategic approach to diversifying your portfolio. After carefully considering your investment goals, time horizon, and risk tolerance, you would then invest different percentages of your portfolio in targeted asset classes to pursue your goal.

Winning asset classes over time

The following table, which shows how many times during the past 30 years each asset class has come out on top in terms of performance, helps illustrate why diversifying among asset classes can be important.

	Number of winning years, 1987-2016
Cash	3
Bonds	5
Stocks	10
Foreign stocks	12

Performance is from December 31, 1986, to December 31, 2016. Cash is represented by Citigroup 3-month Treasury Bill Index. Bonds are represented by the Citigroup Corporate Bond Index, an unmanaged index. Stocks are represented by the S&P 500 Composite Price Index, an unmanaged index. Foreign stocks are represented by the MSCI EAFE Price Index, an unmanaged index. Investors cannot invest directly in any index. However, these indexes are accurate reflections of the performance of the individual asset classes shown. Returns reflect past performance and should not be considered indicative of future results. The returns do not reflect taxes, fees, brokerage commissions, or other expenses typically associated with investing.

The principal value of cash alternatives may fluctuate with market conditions. Cash alternatives are subject to liquidity and credit risks. It is possible to lose money with this type of investment.

The return and principal value of stocks may fluctuate with market conditions. Shares, when sold, may be worth more or less than their original cost.

U.S. Treasury securities are guaranteed by the federal government as to the timely payment of principal and interest, whereas corporate bonds are not. The principal value of bonds may fluctuate with market conditions. Bonds are subject to inflation, interest rate, and credit risks. Bonds redeemed prior to maturity may be worth more or less than their original cost.

The risks associated with investing on a worldwide basis include differences in financial reporting, currency exchange risk, as well as economic and political risk unique to the specific country.

Investments offering the potential for higher rates of return also involve higher risk.

Expect the Unexpected: What to Do If You Become Disabled

About 20% of Americans live with a disability, and one in four of today's 20-year-olds will become disabled before retiring.

Source: SSA, Disability Facts, 2017

The average age of SSDI recipients in 2015 was 54.

Source: Fast Facts and Figures About Social Security, 2016

In a recent survey, 46% of retirees said they retired earlier than planned, and not necessarily because they chose to do so. In fact, many said they had to leave the workforce early because of health issues or a disability.[1]

Although you may be healthy and financially stable now, an unexpected diagnosis or injury could significantly derail your life plans. Would you know what to do, financially speaking, if you suddenly became disabled? Now may be a good time to familiarize yourself with the following information, before an emergency arises.

Understand any employer-sponsored benefits you may have

Disability insurance pays a benefit that replaces a percentage of your pay for a designated period of time. Through your employer, you may have access to both short- and long-term disability insurance. If your employer offers disability insurance, be sure to fully understand how the plan works. Review your plan's Summary Plan Description carefully to determine how to apply for benefits should you need them, and what you will need to provide for proof of disability.

Short-term disability protection typically covers a period of up to six months, while long-term disability coverage generally lasts for the length of the disability or until retirement. Your plan may offer basic coverage paid by your employer and a possible "buy-up" option that allows you to purchase additional coverage.

According to the Bureau of Labor Statistics, 40% of private industry workers have access to short-term disability insurance through their employers, while 33% have access to long-term coverage. For both types of plans, the median replacement amount is about 60% of pay, with most subject to maximum limits.[2]

Consider a supplemental safety net

If you do not have access to disability insurance through your employer, it might be wise to investigate other options. It may be possible to purchase both short- and long-term group disability policies through membership in a professional organization or association. Individual policies are also available from private insurers.

You can purchase policies that cover you for life, until age 65, or for shorter periods such as two or five years. An individual policy will remain in force as long as you pay the premiums. Because many disabilities do not result in a complete inability to work, some policies offer a rider that will pay you partial benefits if you are able to work part-time.

Most insurance policies have a waiting period (known as the "elimination period") before you can begin receiving benefits. For private insurance policies, this period can be anywhere from 30 to 365 days. Group policies (particularly through your employer) typically have shorter waiting periods than private policies. Disability insurance premiums paid with after-tax dollars will generally result in tax-free disability benefits. On the other hand, if your premiums are paid with pre-tax dollars, typically through your employer, your benefit payments may be taxable.

Review the Social Security disability process

The Social Security Administration (SSA) pays disability benefits through two programs: the Social Security Disability Insurance (SSDI) program and the Supplemental Security Income (SSI) program. SSDI pays benefits to people who cannot work due to a disability that is expected to last at least one year or result in death, and it's only intended to help such individuals make ends meet. Consider that the average monthly benefit in January 2017 was just $1,171.

In order to receive SSDI, you must meet strict criteria for your disability. You must also meet requirements for how recently and how long you have worked. Meeting the medical criteria is difficult; in fact, according to the National Organization of Social Security Claimants' Representatives (NOSSCR), about two-thirds of initial SSDI applications are denied on their first submission. Denials can be appealed within 60 days of receipt of the notice.[3]

The application process can take up to five months, so it is advisable to apply for SSDI as soon as you become disabled. If your application is approved, benefits begin in the month following the six-month anniversary of your date of disability (as recorded by the SSA in your approval letter). Eligible family members may also be able to collect additional payments of up to 50% of your benefit amount.

SSI is a separate program, based on income needs of the aged, blind, or disabled. You can apply to both SSI and SSDI at the same time.

For more information, visit the Social Security Disability Benefits website at ssa.gov, where you will also find a link to information on the SSI program.

What happens to my property if I die without a will?

If you die without a will, your property will generally pass according to state law (under the rules for intestate succession). When this happens, the state essentially makes a will for you. State laws specify how your property will pass, typically in certain proportions to various persons related to you. The specifics, however, vary from state to state.

Most state laws favor spouses and children first. For example, a typical state law might specify that your property pass one-half or one-third to your surviving spouse, with the remainder passing equally to all your children. If you don't have children, in many states your spouse might inherit all of your property; in other states, your spouse might have to share the property with your brothers and sisters or parents.

But not all property is transferred by will or intestate succession. Regardless of whether you have a will, some property passes automatically to a joint owner or to a designated beneficiary. For example, you can transfer property such as IRAs, retirement plan benefits, and life insurance by naming a beneficiary. Property that you own jointly with right of survivorship will pass automatically to the surviving owners at your death. Property held in trust will pass to your beneficiaries according to the terms you set out in the trust.

Only property that is not transferred by beneficiary designation, joint ownership, will, or trust passes according to intestate succession. You should generally use beneficiary designations, joint ownership, wills, and trusts to control the disposition of your property so that you, rather than the state, determine who receives the benefit of your property.

Even if it seems that all your property will be transferred by beneficiary designation, joint ownership, or trust, you should still generally have a will. You can designate in the will who will receive any property that slips through the cracks.

And, of course, you can do other things in a will as well, such as name the executor of your estate to carry out your wishes as specified in the will, or name a guardian for your minor children.

I get so many credit card reward offers. How do I know which one to choose?

Credit card reward programs are more popular than ever. In order to keep up with such high demand in a competitive market, credit card companies are coming up with new and more enticing offers every day. How do you know which one to choose?

Are you the type of credit card user who likes to travel and/or frequent a particular hotel or airline? If so, then a travel rewards credit card might be the right option for you. Typically, a travel rewards card allows you to earn points (sometimes referred to as miles, depending on the card) for every purchase you make on the card. Typically, cards offer a reward that is equal to 1% of your purchase, which means that for every $100 you spend, you will earn 1 point or mile. Some credit card companies offer even greater incentives, such as double points for specific types of purchases or bonus points when you open up an account. Before signing up, however, be sure to read the fine print. Many travel rewards cards have specific rules that apply to point redemption and may charge a hefty annual fee.

Don't want the hassle that sometimes goes along with redeeming points on a travel rewards card? Consider a cash back rewards card. While not as thrilling as racking up points to take a trip to some far-off, exotic destination, cash back rewards cards may be better for individuals who aren't frequent travelers and who tend to use credit cards for everyday purchases. Most cash back rewards cards offer a flat cash reward on general purchases. Others offer higher rewards for different spending categories (e.g., dining or entertainment purchases). Consider your credit card spending habits to determine which cash back rewards card would be appropriate for you.

Finally, it's important to remember that rewards cards work best when you pay off your account balance each month. Be sure to charge only what you can afford to pay off and avoid spending over your budget just to earn more rewards. Otherwise, the unpaid balance you carry forward will create finance charges that may cancel out the value of any rewards you accumulate.
